Texas Association of Appraisal Districts Issues Guidance

AUSTIN – Today the Texas Association of Appraisal Districts announced historic growth in Texas real estate values.

According to the association, regions around the state have seen increases in values between 20-50% since last year. Alvin Lankford, president of the association and chief appraiser of Williamson County said, “The Texas real estate market is growing as fast as we have ever seen it in the state’s history. We have all seen the countless stories about people moving to Texas from other states. This increase in population contributes to a shortage of homes available and to the increase in prices paid for homes.”

Lankford added, “As a reminder, according to state law, appraisal districts are to appraise property at its market value. In fact, we are regulated by the State of Texas to make sure we do our jobs fairly and accurately. But, keep in mind, we are not responsible for setting the tax rate. We follow the law, state regulations, and the reality of real estate market sales when making our value determinations.”

In a state without a personal income tax, cities, counties, hospitals, school districts and community colleges all rely heavily on property taxes. These same political subdivisions set the tax rates that determine the amount of taxes paid by homeowners and businesses. The State of Texas also benefits from property taxes to the tune of over \$5.6 billion in a two-year budget cycle. That’s 75% more than the state makes from the lottery. Also, in the most recent budget passed by the legislature, the state assumed that property tax revenue collected (not appraised amounts) would increase by 6% over a two-year period.

Lankford concluded with, “Considering for many of us our home is our largest investment, an increase in market value can be considered a blessing. However, many people equate an increase in market value to mean an equal increase in property taxes which is simply not the case. An increase in property taxes is sometimes needed to keep the police and fire departments adequately funded, along with our schools, hospitals, and other vital services for our communities.

However, the increase in what a person owes in property taxes is unlikely to be proportional to the increase in home values. First, there is a cap of 10% on the amount the assessed value can go up for properties with a homestead exemption. Second, caps limit how much additional revenue from property taxes a taxing unit can collect without going to the voters for approval will limit the increase in taxes. It has never been more important to have a homestead exemption and the resulting 10% cap in assessed value than it is today.”
